How to Estimate a 10kwh Battery Runtime. How long a 10kwh / 10000 watt battery will last comes down to usage. The following assumes you will only use the battery and not rely on a solar array. 10 kwh / hourly wattage consumption = runtime. If you run a 1500 watt load, a 10kwh battery is good for 6 and half hours. 10000 / 1500 = 6.6

both of those links are just resellers of chinese-made ready-to-rack systems. you can get exactly the same on ebay or aliexpress. they even mention that the included BMS is basically crap and suggest to add a battery monitor, which is basically just another BMS so the crap they bought in those ready-made systems won"t cause problems the only advantage of buying from either ???
