We suggest selecting a 12 volt deep cycle marine battery with at least a 110 amp hour rating, usually a group 27 size battery. The higher the amp-hour rating, the more run time you will receive. If an amp hour rating is not available, select a deep cycle battery with a minimum of 180 minutes reserve capacity. Lithium Batteries maintain

How Do We Calculate Run Time? The run time of trolling motor batteries is calculated by dividing the battery's amp-hours (Ah) rating by the number of amps the motor draws at a given speed.. In our calculations, we assume 80% depth of discharge (DoD), which means the battery will still have 20% remaining capacity. This is a recommended value for lithium ???

When comparing the DCS 110ah lithium battery with an AGM 115ah deep cycle battery, several distinct advantages emerge, particularly in terms of efficiency, longevity, and practicality. Here's a breakdown: For a LiFePO4 110 amp hour battery, assuming a nominal voltage of around 12.8V (common for LiFePO4 batteries), the capacity in watt

When choosing your lithium battery, make sure its maximum continuous output current is higher than your trolling motor's maximum Amp draw. Many lithium batteries are rated at 1c, which means the maximum discharge current is equal to its capacity. For example, a 60Ah lithium battery can be discharged at 60 Amps.
