On my 1977 Dodge truck (W150, 318cu in), the engine just stalls for no reason after about 30 minutes of driving. If I wait 10-15 minutes, it starts right back up again and goes for about 5-10 minutes then dies. 1977 W150 Power Wagon. Save Share I've heard that old Dodges have ancient wiring systems that put too much load on the system

The Dodge Power Wagon is a four-wheel drive medium duty truck that was produced in various model series from 1945 to 1980 by Dodge. [1] The Power Wagon name was revived for the 2005 model year as a four-wheel drive version of the Dodge Ram 2500. [2] [3] As a nameplate, "Power Wagon" continues as a special package of the four-wheel drive version of 3/4 ton Ram Trucks ???

Step 7: Remove the bolt(s) holding the EVAP emissions control canister. The EVAP emissions control canister is attached to a bracket in two ways. First, there are two bolts that secure the canister to a bracket. On some vehicles, a secondary set of clips secures the canister to the vehicle's undercarriage. There are commonly one or two bolts.
