

There are two main types of inverters used in solar installations: string inverters and micro-inverters. String inverters are the more traditional type, where a single inverter is connected to a series of solar panels (a "string"). These inverters are typically more cost-effective for larger solar arrays, but they can be less efficient if

Under-sizing Your Inverter. Using the graph above as an example, under-sizing your inverter will mean that the maximum power output of your system (in kilowatts ??? kW) will be dictated by the size of your inverter. Solar inverter under-sizing (or solar panel array oversizing) has become a common practice in Australia and is generally preferential to inverter over-sizing.
