The higher the energy loss, the lower the efficiency  
rating. Look for solar inverters with high efficiency  
ratings between 96% and 99%. Depending on the  
type, solar inverters will match either your system  
size or your panel size. The string inverters"  
maximum output capacity should match your  
system size.

These days, most inverters are 96% to 99% efficient. The minimum and maximum voltages (expressed in DC) provide a voltage level range at which your system can input solar energy from your panels to your inverter. The wider the range, the better your inverter can perform in more extreme conditions.

We purchased a Powmr 3500 all in one solar inverter/charge controller. Ours has the orange and Black color scheme. We chose this unit because We have a very limited budget and limited space in the trailer. I wanted the 3500 watt inverter because it matches the 30 amp input on my rv almost perfectly.  $3500w$  at  $120$  volts =  $29$  amps.

What is a 3500-watt solar inverter? A 3500-watt solar inverter is designed to handle up to 3500 watts (3.5 kilowatts) of DC input power from solar panels and convert it into 3500 watts of AC output power. The AC output connects to the home or building's electrical system to power lights, appliances, and other loads. 3500-watt inverters work

A good rule of thumb is to always choose an inverter with 20% to 50% more than the total power that you need. Weight. With the voltage transformer onboard, your pure sine wave inverter will weigh more than most modified sine wave inverters, watt-for-watt. Transformers use heavy magnetic cores, and there's no way around it.
