

How does the Atlas 412 lift work?

The Atlas® 412 uses a high strength cable system (with a under runway oversized hydraulic cylinder) powered by a 220 volt (single phase) power unit to raise and lower the lift. Many competitors use an "old style" chain lifting system with an exposed hydraulic cylinder system.

How does the Atlas 414 lift work?

The Atlas® 414 uses a high strength cable system (with a under runway oversized hydraulic cylinder) powered by a 220 volt (single phase) power unit to raise and lower the lift. Many competitors use an "old style" chain lifting system with an exposed hydraulic cylinder system.

Do lift systems power towers come with two power units?

All Lift Systems Power Towers come standard with two power units. This allows for the system to be easily split between two projects, or for long loads such as long vessels. Our lockable, enclosed power units all feature large fork pockets, lifting lugs to allow for overhead lifting, and tie downs for transport.

What is a 414 lb lift?

The Atlas® 414 (14,000 LB. capacity four post lift) incorporates many structural and cosmetic features that are found on lifts costing thousands of dollars more money. The Atlas® 414 is tested to ensure that this lift system will perform flawlessly at its rated capacities.

How do you lock a multi-point hydraulic system?

Always mechanically lock the load either by using cribbing blocks or mechanically operated locknut cylinders. The above shows a common multi-point hydraulic system using single-acting cylinders and control manifolds.

What is the difference between a chain lift and a 412?

Old style chain lifts are difficult to "level" properly and the exposed hydraulic cylinder is responsible for numerous "door dings". Finally, the Atlas® 412 features "tracks" between the runway to allow the use of a rolling bridge jack (such as the Atlas® RJ6BK) on the lift. Rolling jacks sold separately.

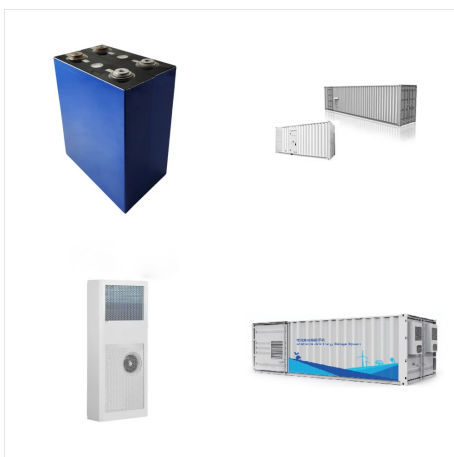

4-POINT LIFT SYSTEM POWER UNIT

Our hydraulic power units are certified to meet the rigors of off shore and oilfield use. The engineered lifting systems are constructed of fully boxed members, with a 4 point lift system and a 3/4" center eye pad lift point.

2.4.1 Plan Installation Layout The lift requires the space as shown in figure 2-2. The major components of the lift are shown in figure 2-3 for familiarity. Select the spot on your foundation where the Front Left Control Post is to be located and plan from there. 213-5/8" 254" 47-3/8" Power Unit 189-3/4" 130-3/4" 114-1/4" 109-1/2" 185" 20" 43
