

Renewable energy is energy that has been derived from earth's natural resources that are not finite or exhaustible, such as wind and sunlight. Renewable energy is an alternative to the traditional energy that relies on fossil fuels, and it ???

Renewable energy, also known as clean energy, is produced from natural resources that are generated and replenished faster than they are consumed???such as the sun, water and wind. Most renewable energy sources produce zero carbon emissions and minimal air pollutants.

renewable energy, usable energy derived from replenishable sources such as the Sun (solar energy), wind (wind power), rivers (hydroelectric power), hot springs (geothermal energy), tides (tidal power), and biomass (biofuels).

What is renewable energy? Renewable energy is energy from sources that are naturally replenishing but flow-limited; renewable resources are virtually inexhaustible, but they are limited by the availability of the resources. The major types of renewable energy sources are: Biomass. Wood and wood waste; Municipal solid waste; Landfill gas and

Renewable energy sources, such as biomass, the heat in the earth's crust, sunlight, water, and wind, are natural resources that can be converted into several types of clean, usable energy: Bioenergy. Geothermal Energy. Hydrogen and Other Renewable Fuels. Hydropower.
