Battery-Powered Pedals. Although using a power supply with your pedals is undoubtedly the most effective method, some pedals are capable of being powered by a 9-volt battery. This allows them to be used when there is no external power available. It's recommendable to combine the use of a power supply with a battery whenever possible.

A good pedal power supply ??? particularly a supply with isolated outputs ??? results in noise-reduction in your signal chain and a cleaner, more intuitive pedalboard operation overall. cables in lengths from 21" to 26," three adapters for pedals with reversed polarity or different jack types and a 9-volt battery adapter cable. A pedal

Power draw - 9V DC center pin negative, external supply only: 130mA at 9V; Dimensions : 4.5" x 3.75" x 2.25" (114 x 95 x 56mm) Weight: 2 pounds (910g) Includes Wampler's limited 5-year warranty; Designed and Built in the USA; The Wampler Catacombs carries a street price of \$299.97. I found the exact same result. Seems like more sustain on 18v, too. I tried to volume match going between 9v and 18v, and even set the volume a little lower on 18v than the 9v so I wasn"t being fooled y the volume difference and I swear I???

Pedal 6: 100mA. You need a power supply rated at 600mA or more. A 500mA power supply would under power your pedals. At best your tone is going to suffer. At worst you might need to buy new pedals. But a 600mA power supply might not be enough either. The rule of thumb is to have a power supply at least 100mA more than the max draw. Stepping up

Guitar pedals are electronic devices that musicians use to manipulate their guitar's sound. Some of these pedals require a 9V battery to operate. The battery powers the circuitry inside the pedal, which alters the guitar's signal in various ways. Without a reliable power source like a 9V battery, the pedal may not function correctly or at all.
