

Growth in the renewable energy sector has given rise to a new form of securitized investment opportunity-solar asset-backed securities (ABS). This innovative investment packages consumer receivables originated by solar energy companies, and offers fixed income investors an opportunity to invest in the growing renewable energy movement.

What is solar investing?

Solar investing generally refers to investing in companies that produce or sell solar energy products. This can include solar panel manufacturers, installers, or companies operating solar energy facilities. Investors usually invest in solar through traditional products like stocks, mutual funds, and exchange-traded funds (ETFs).

Who can invest in solar energy?

This can include solar panel manufacturers, installers, or companies operating solar energy facilities. Investors usually invest in solar through traditional products like stocks, mutual funds, and exchange-traded funds (ETFs). Another common type of solar investing is the installation of solar panels on a home or business.

What is the Invesco solar ETF (fund)?

The Invesco Solar ETF (Fund) is based on the MAC Global Solar Energy Index(Index). The Fund will invest at least 90% of its total assets in the securities, American depositary receipts (ADRs) and global depositary receipts (GDRs) that comprise the Index. The Index is comprised of companies in the solar energy industry.

Is solar energy a good investment?

Solar energy represents an enormous market opportunity. To decarbonize the economy,the U.S. needs to invest an estimated \$1.2 trillion in solar energy developments alone through 2050. Meanwhile,the global investment opportunity for solar is even larger. Many companies focus on solar energy and should benefit from the sector's growth.

What are the different types of solar investing?

Another common type of solar investing is the installation of solar panels on a home or business. Solar panels can be used to power all or part of a home or business, and the electricity generated can offset the

cost of an energy bill. Investors can also use solar panels to generate income by selling their electricity back to a utility company.
