

Is AB 900 a good AMP?

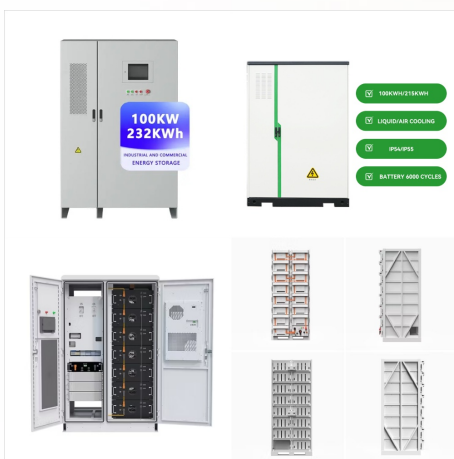

This is an AB Systems power amp, Precedent 900 series from the mid 1980s. It's an incredibly good sounding amp. Their amps were legendary for rugged durability and excellent sound. This one is great as a studio amp, since it has no fans and is very quiet in operation. It puts out 450W per channel at 4 ohms. Weighs 40 lbs.

Do they make class AB amps?

They make/made Class AB in the smaller older amps with a unique switching Class G in the "older amps which some techs don't know how to repair, so it's nice going straight to the source.

Are AB amps any good?

If you remember AB amps from the late 70's, 80's etc. and their rugged durability with excellent longevity, you'll appreciate the fact their modern amps are just good or better and in some cases share a lineage with the original gear. EDIT: By "redone"; I'm referring to the boards, etc. I'm refinishing it myself. I love vintage gear with a story.

BRAND: AB Systems. MODEL: 1201A. FUNCTION: Power Amplifier Amp. PRODUCT DESCRIPTION: This listing is for a AB Systems 1201A Power Amplifier Amp. SPECS: Serial # N/A; 300 watts per channel into 8Ω(C) (stereo), 1000 watts into 8Ω(C) (mono) ACCESSORIES INCLUDED: IEC Power Supply. UNPACKAGED WEIGHT: 65.50 lbs. UNPACKAGED ???

old school made in USA power amp, rough condition but recently cleaned the pots it works great, not sure about all the lights and cosmetics are rough, but guaranteed working will be well packed and insured. AB Systems 105A stereo power amplifier. Used ??? Fair. New Price \$69 + \$35 Shipping. This piece of gear has sold. View similar gear

This is a review and detailed measurements of the Niles SI-275 stereo power amplifier. It is on kind loan from a member. (probably "cleaner") vintage Class? Model Seventy amp. I am curious about the relatively new Wharfedale D320 L/R + D300C Center. (L/R speakers switchable to YarLand 2-channel tube amplifier) Dedicated 2-channel audio

This is biwiring, not biamping. Biamping requires separate power amplifier channels for each channel, but your A/B switch is merely two connectors on one channel. Both statement are logical nonsense. Amplifiers don't control power, they control voltage and a two channel amp has two channels, by definition. Power is drawn by the speaker ($W=V$

AB SYSTEMS TWO CHANNEL POWER AMP MODEL 205B

The Monolith 2X is a state of the art, high performance, audiophile grade multichannel home theater amplifier. Rated at a full 200 watts per channel into 8 ohms an Monolith by Monoprice 2x200 Watts Per Channel Two Channel Home Theater Stereo Power Amplifier with XLR Inputs - Monoprice

This particular amp is (I believe) 200 WPC @ 8 ohms and about 350 at 4 ohms. It has 2 very large transformers and 4 output transistors per side. The circuitry looks simple but efficient. The outputs sit on a massive heat sink that runs across the back. This amp was modified with two 1/4" jacks replacing the Original RCA jacks.
