

Does ExaGrid provide data security?

The data security capabilities in the ExaGrid product line, including optional enterprise-class Self-Encrypting Drive (SED) technology, provide a high level of security for data at rest and can help reduce IT drive retirement costs in the data center. All data on the disk drive is encrypted automatically without any action required by users.

Can ExaGrid appliances be deployed in the backup application software?

and with ExaGrid there are no agents to deploy or manage. When comparing ExaGrid appliances deduplication in the backup application software, it is important to keep in mind that using deduplication in the backup application software typically requires greater resources on the backup

What is a multi-site ExaGrid system?

due to its high-performance data deduplication capability. In a multi-site ExaGrid environment, the onsite ExaGrid system is only sending deduplicated data--the backup data bytes that change between each backup--over the wide area network (WAN) to the offsite ExaGrid appliance. The offsite ExaGrid appliance is ready for data restore and fast recovery

What are ExaGrid appliances?

ExaGrid appliances are comprised of Intel Quad Core XEON processors, RAID6 + Hot Spare storage using enterprise class SATA or SAS drives, and ExaGrid software. Each appliance plugs into a switch and is virtualized into a shared GRID. The media server is connected to the same switch and sees the appliances as one or more NAS shares.

Can ExaGrid appliances be mixed and matched?

ExaGrid appliance models can be mixed and matched, from 1-32 appliances, in a single scale-out system. ExaGrid's appliances work seamlessly with the industry's leading backup applications and typically install in about one hour.

What is The ExaGrid cloud tier?

The ExaGrid Cloud Tier allows customers to replicate deduplicated backup data from a physical onsite
