

Will Tesla Solar power Ta'u in American Samoa?

Tesla has announced their solar panels are nearly entirely powering the island of Ta'u in American Samoa. The island used to depend entirely on imported diesel fuel for its electricity, but a new initiative has seen the islanders build a 1.4-megawatt microgrid that absorbs and stores solar power for all their energy needs.

How long can a solar powerpack last?

The system offers 6 megawatt hours of storage, meaning the island can stay powered for three full days without the sun shining - but when it does, the microgrid absorbs enough solar in just 7 hours of sunlight to top the Powerpacks back up to 100 percent capacity.

Will Elon Musk build more solar panels on Kauai?

Tesla and Solar City are currently installing an even bigger solar farm with almost 55,000 solar panels on the Hawaiian island of Kauai - and Tesla CEO Elon Musk has declared the companies intend to build hundreds more of these installations.
