Why should you choose APs alternators?

APS's high output alternators and dual alternator systems provide unparalleled, continuous high powerthat our clients depend on to get the job done.

What is a dual alternator bracket kit?

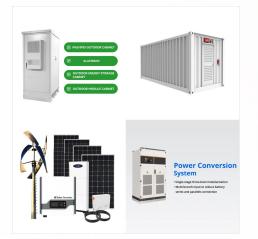

Custom bracketry can also fulfill any needs to add other systems or equipment under the hood, and dual alternator bracket kits allow for the placement of two high output alternators within a crowded engine compartment deliver the power required to meet critical demands.

Are APS high output alternators reliable?

APS's high output alternators offer tested, proven durability. With over 2,000 vehicles currently in the field and 18,000 test miles logged at the Nevada Automotive Test Center, our high output alternators withstand the harshest environments to deliver stable, dependable power.

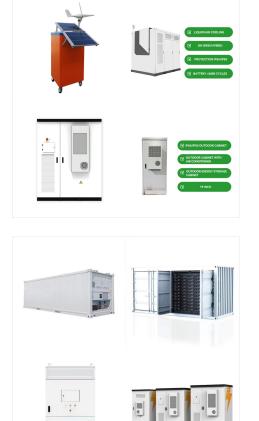

Does APS make custom alternator brackets?

APS designs custom alternator bracketsand dual alternator bracket kits for optimal fit,form and function,including precision alignment of the pulleys fed from your vehicle's engine to the alternator (s). With our custom alternator brackets,APS can accommodate changes to the OEM engine schematic based on client requirements.

If you need a Freightliner alternator or dual alternator brackets look at our quality selection at American Power Systems or contact us to learn more. . Start a conversation with us today! . strong output at idle RPM is critical because the alternators must meet all on-board current demands, as-Wayne Meretsky, Owner Kinetic Scientific, Auckland, New Zealand

American Power Systems, Inc. (APS) has developed a new series of lower turn-on RPM alternators ideal for those needing to fully charge secondary power banks in less time, even while idling. The new 130 HPI Series was developed to have a robust lower turn-on RPM, allowing end users to begin charging even at low or idling speeds.

American Power Systems has developed two new lower turn-on RPM alternators with the addition of 60- and 90-amp, 48-volt high-output alternators to its product line-up. The company said that with these options, end users can potentially begin charging secondary power banks at even lower speeds, including at factory idle without a high idle kit, seeing results in ???
