I have a 220/60/15kV Power Transformer. The
tertiary of the Power Transformer will be connect to
a 15/0.4kV (150kVA) Transformer for supplying the
Substation Auxiliary Services. The maximum tertiary
power of the Power Transformer is 20MVA. By my
calculations the maximum current in the tertiary will
be $20\text{MVA}/(1.73 \times 15\text{kVA})=769,8\text{A}$.
