

Are Xstatic batcap batteries good?

For some time now, Xstatic BatCap have been producing premium quality batteries that share the low ESR/ESL attributes of a capacitor, but also function as a very high current battery. In development for over 2 years, the new Xstatic BatCap 4000 battery provides double the amount of energy as their very popular model 2000 BatCap.

What is Xstatic batcap?

Sunday: Closed The Xstatic Batcap is simply a car audio battery that can discharge just as quickly as a capacitor and recharges faster than a conventional lithium battery since the internal resistance is so low. Batcaps are the fastest car audio lithium batteries in the world!

How much does a batcap 4000 battery cost?

Measuring 13 inches long, 6.75 inches wide and 8.7 inches tall, the BatCap 4000 comes with convenient and heavy duty top terminals, and the design is non-spillable which allows mounting in any position. The battery has a suggested retail price of \$499.00(USD).

Can a batcap crank start a car?

These Batcaps can crank start your car! The stiffening capacitor is similar to a car audio battery in that it stores a charge. The fundamental difference is it cannot create electrons. It can only store and supply (discharge) them upon demand.

The XSTATIC BATCAP is simply a car audio battery that can be discharged just as quickly as a capacitor. Therefore you have a constant supply of electrons that will discharge at lightning speed! This puts less strain on your stock alternator ???

It can only store and supply (discharge) them upon demand. The advantage with a capacitor is that it discharges in 20 thousandths of a second unlike a battery that does it in 1 full second. The lithium battery therefore cannot discharge fast enough to effectively supply the amplifier and this is the reason for "power sags."

Batcap vs. 2nd Battery - Hey guys, long time listener, first time caller!! Long but quick question. What the heck is a Batcap? I mean, I know what they are, but what exactly do they do? I have heard they are a battery, a capacitor, a battery that acts like a ???

Two identical layered metal-organic frameworks (MOFs) (CoFRS and NiFRS) are constructed by using flexible 1,10-bis(1,2,4-triazol-1-yl)decane as pillars and 1,4-benzenedicarboxylic acid as rigid linkers. The single-crystal structure analysis indicates that the as-synthesized MOFs possess fluctuant 2D networks with large interlayer lattices.
