You simply use a technique called "AC Coupling" where the batteries are connected directly into the 240V AC in the switchboard using an AC Battery inverter. Here's how it works: As you can see, the output of the micro inverters is 240V AC and the Battery Inverter converts the battery's DC to 240V AC, so everything works together nicely.

A solar power inverter converts or inverts the direct current (DC) energy produced by a solar panel into Alternate Current (AC.) Most homes use AC rather than DC energy. is part of a solar array system with a battery backup system. The hybrid inverter can convert energy from the array and the battery system or the grid before that energy
