For off-grid solar systems, off-grid inverters don't have to match phase with the utility sine wave as opposed to grid-tie inverters. Electrical current flows from the solar panels through the solar charge controller and the battery bank before it is finally converted into AC by the off-grid inverter.

Yes, anti-islanding protection is a fundamental feature of grid-tied inverters. This safety mechanism prevents the inverter from circulating electricity within the system, which could pose serious safety risks to utility workers and equipment. When the grid power fails, the inverter must quickly detect this condition and cease power export.
