The 40 kWh data is clearly a bit better distributed across the plot. Regardless, it isn't a large enough data set to make a definitive correlation for either battery pack. There appear to be a lot of outliers in both sets. Unfortunately, most people just listed their SOH and odometer reading, not the age of the battery.

A 40 kW Solar Kit requires up to 2,200 square feet of space. 40kW or 40 kilowatts is 40,000 watts of DC direct current power. This could produce an estimated 3,000 to 4,000 kilowatt hours (kWh) of alternating current (AC) power per month, assuming at least 5 sun hours per day with the solar array facing South.

"Experience reliable & efficient energy storage with our 40KW LiFePO4 battery featuring a built-in inverter. Perfect for backup power, renewable energy systems, and more. Long lifespan, high safety, and eco-friendly - your ultimate energy solution."

The LEAF battery case is a different shape and has no connection for the e-NV200's battery cooler. Traction batteries for these two vehicles are not interchangeable. (LEAF battery has a bump which fits under the car's back seats; e-NV200 battery is more or less flat. Especially when it's at a low state of charge, when it's flat in two ways.)

We need a place to post battery info, temperature observations, and other things relating to the new 40kwh pack. There are a few stats scattered in other topics, but having this one should make it easier to keep track of them. Links to the other posts would be a good idea. When I went to
