

The government of Belize (GoB) has laid out its Gas and Electricity transition plan and goals, including an increase in renewables to 85% by 2033 and a reduction in energy intensity; energy intensity measures how much energy is required to produce one unit of economic output and is an indicator of climate change's effects on economies.

Is Belize a good place for solar power?

Belize's abundant sunshine makes it an ideal location for solar power. Indeed,in 2018,its first utility-scale solar plant opened for business - quickly growing in popularity to eventually account for more than half of the country's electricity production.

Which sector is dominated by hydropower in Belize?

Belize's Gas and Electricity sectoris dominated by hydropower, accounting for nearly 50% of total electricity generation. Climate change could reduce reservoir

Does Belize have a climate resilience investment plan?

Belize's NDC draws heavily on both the NCCPSAP and the more detailed National Climate Resilience Investment Plan (NCRIP). It includes various mitigation commitments; however,few contain baselines due to Belize's relatively modest carbon tax base. In addition,the country is making efforts to encourage climate-smart agricultural practices.

Should Belize complete the costing exercise under ncrip?

Belize should complete the costing exercise started under NCRIPand further develop its National Adaptation Action Plan so as to conform with the Paris Agreement's nationally determined contributions (NDC). These can help shape sector-specific mitigation and adaptation plans while being financially manageable, measurable, and realizable.
