

Does Black Hills Energy buy solar power?

Black Hills Energy already buys power from wind farms. It also buys excess generation from residential and commercial solar producers. The Fall River Solar Project is the utility's first investment in a large-scale source of solar power.

Why is Black Hills Energy launching a solar project?

"With a project of this magnitude -- the first and largest utility-scale solar project for Black Hills Energy -- we will assure significant cost savings for our customers, while achieving long-lasting environmental benefits and economic vitality for our local and regional economies for years to come."

Will a solar farm save Black Hills Energy 66 million a year?

Once complete, the solar farm will result in \$66 million in cost savings to Black Hills Energy's electric customers over 15 years, according to the company. However, former Public Utilities Commission member and Pueblo attorney Frances Koncilja said she believes the solar generation will not lower current rates.

Does Black Hills Energy manage project risks?

Black Hills Energy is known for analyzing and managing risks to ensure safe, reliable electric service for our customers. We were surprised to find little attention given to identifying and addressing project risks in plans for a government utility takeover.

Will Black Hills Energy take over southern Colorado?

The study estimates that if the city takes over the entire Black Hills Energy Southern Colorado system, it will be liable for \$446 million in stranded generation costs. However, the study does not provide enough information to determine if this calculation is correct.

Does Black Hills Energy have an inspection process?

From planning and costs, inspection and permits, to natural gas metering standards. To continue improving upon our safe and reliable service, we now have an inspection process for all conduit systems that contain Black Hills Energy wire.

BLACK HILLS ENERGY SOLAR POLICY
