

Where is Bouvet Island?

Bouvet Island (/ˈbuːveɪ /BOO-vay; Norwegian: Bouvetøya [bʊˈvøːə]) is an uninhabited subantarctic volcanic island and dependency of Norway. It is a protected nature reserve, and situated in the South Atlantic Ocean at the southern end of the Mid-Atlantic Ridge, it is the world's most remote island.

How far is Bouvet Island from Antarctica?

Bouvet Island is one of the most remote islands in the world. The closest land is Queen Maud Land of Antarctica, which is 1,700 km (1,100 mi) to the south; 58 and Gough Island, 1,845 km (1,146 mi) to the north.

How far above sea level is Bouvet Island?

Considered the most remote island on earth, Bouvet Island rises more than 4 km above the seafloor, with Olavtoppen peak rising 780 m above sea level. The island encompasses an area of 49 km² with more than 93% covered in ice.

Which map type is best for viewing Bouvet Island?

There isn't a definitive answer to which map type is the best for viewing Bouvet Island. Maphill enables you to look at the same country from many different angles. While this satellite detailed map is nice, there is a good chance you will like some other styles of Bouvet Island map even more. Consider selecting another style in the above table and viewing Bouvet Island from a different perspective.

What is a satellite map of Bouvet Island?

A satellite map of Bouvet Island is an aerial photograph taken by a plane that provides more details than Maphill's own maps can offer. Google calls this map a satellite map, but a more correct term would be an aerial map.

How old is the Bouvet Island map provided?

The photography used in the maps provided by Maphill, including this one of Bouvet Island, is usually three to four years old. Note that the primary purpose of Maphill is to provide local street maps rather than a planetary view of the Earth.

Bouvet Island was first discovered in 1739 by the
French navigator Jean-Baptiste Charles Bouvet de
Lozier, who also gave the island its name. At that
time, it was still assumed that the northernmost
point of the "Terra Australis" had been found. The
coordinates calculated at that time were
unsuccessfully visited by James Cook 50 years later

Expedition. Because of its location, weather researchers have long thought it a great place to put a weather tower. On 2 April 1964, the Royal Navy's Antarctic ice vessel HMS Protector was sent to the island to ???

It's been about a month since we released our Tidy Trim interior finishing kits. We've received a ton of positive feedback, Thanks! There was a lot of time and effort put into the fit and finish of all the parts. The end result should save you time and the best part is that the kit will give you a matching profession

The island lies 1,700 km (1,100 mi) north of the Princess Astrid Coast of Queen Maud Land, Antarctica, 1,870 km (1,160 mi) east of the South Sandwich Islands, 1,845 km (1,146 mi) south of Gough Island, and 2,520 km (1,570 mi) south-southwest of the coast of South Africa. It has an area of 49 km² (19 sq mi), 93 percent of which is covered by a glacier. The centre of the island ???
