

Lorsqu'il s'agit de comparer une batterie au lithium 48V 1000AH avec d'autres types de batteries, les différences sont assez claires. Les batteries au plomb traditionnelles, par exemple, sont encombrantes et lourdes par rapport aux batteries au lithium. Cela les rend moins idéales pour les applications où le poids et la taille

You are thinking $v \cdot a = w$. A 10ah 48v battery will run
480 watts for an hour. If you use more than 480
watts, you will get less than an hour. For example
running at 1000 watts will give you under 30 mins of
runtime. However, that is if u run at a full 1000 watts
the entire time. I have a 11ah 48v battery on my
kids bbs02 can easily utilize 1200

Since there's a lot of differences in a "48 Volt Battery" you need to know more specifically the voltage of the battery. If your 48 volt battery is a 56 volt nominal voltage at 100% soc, then you can get an estimate by $56 \times 100 = 5600$ watt hours, so let's say you're looking at a 10 amp load @ 120 VAC (RMS) then you're drawing 1200 watts, so 5600/
