Why did a leading energy company decline a move into offshore solar?

A leading energy company recently declined a move into offshore solar because of the saltwater consideration, which massively affects the durability of the system. PV modules, the key component in solar systems, are not designed for salty environments. Even when PV modules are located on shore but near to the sea, corrosiveness can be a problem.

Can solar projects be built offshore?

Onshore, these projects would be competing for land use with other activities, such as agriculture or urban development. Out at sea though, they are largely out of sight and out of mind. Solar developers are increasingly coming around to the exciting potential of stationing hundreds of photovoltaic systems offshore.
