

What is the energy supply in Iceland?

In terms of total energy supply, 85% of the total primary energy supply in Iceland is derived from domestically produced renewable energy sources. Geothermal energy provided about 65% of primary energy in 2016, the share of hydropower was 20%, and the share of fossil fuels (mainly oil products for the transport sector) was 15%.

Does Iceland produce hydroelectric energy?

Iceland is the first country in the world to create an economy generated through industries fueled by renewable energy, and there is still a large amount of untapped hydroelectric energy in Iceland. In 2002 it was estimated that Iceland only generated 17% of the total harnessable hydroelectric energy in the country.

Does Iceland have wind power?

Furthermore, the country has tremendous wind power potential, which remains virtually untapped. Today, Iceland's economy, ranging from the provision of heat and electricity for single-family homes to meeting the needs of energy intensive industries, is largely powered by green energy from hydro and geothermal sources.

Why does Iceland use oil?

Imported oil fulfills most of Iceland's remaining energy needs, the cost of which has caused the country to focus on domestic renewable energy. Professor Bragi Ólafsson first proposed the idea of using hydrogen as a fuel source in Iceland during the 1970s when the oil crisis occurred.

How much electricity does Iceland use?

In 2015, the total electricity consumption in Iceland was 18,798 GWh. Renewable energy provided almost 100% of production, with 75% coming from hydropower and 24% from geothermal power. Only two islands, Grímsey and Flatey, are not connected to the national grid and so rely primarily on diesel generators for electricity.

Does Iceland use geothermal power?

Currently geothermal power heats 89% of the houses in Iceland, and over 54% of the primary energy used in Iceland comes from geothermal sources.
