

Where are cactus batteries made?

Given a new lease on life, these batteries are then converted into 100kWh energy storage units at Cactus' factory in Muhos, Finland. While a battery is just a battery, the "other" side of Cactus' business involves a cloud computing service layered atop the energy storage unit that controls and optimises a growing fleet of power savers.

How does a cactus power system work?

Conversely, Cactus units can also feed and provide stability to a power grid by balancing supply and demand. When there is a shortage of electricity, the units can automatically discharge energy into the grid, and if there is excess production, the units absorb energy.

Will cactus double its production capacity in 2023?

Finnish maker of smart energy storage units, Cactus has raised EUR2.5 million in a combination of equity and debt funding. With its current production operating at maximum capacity, the capital is slated to help the company more than double its factory size in early 2023, allowing for nearly a 10-fold increase in unit production.

What is a cactus one unit?

The Cactus One unit helps shave the peaks and enables temporary loads larger than the connection size would otherwise allow. "On the ground, companies are concerned about electricity supply and market volatility.

Why should you use cactus one?

Fast charging causes significant energy consumption peaks, and the charging stations may need to limit charging power due to limited connection size. The Cactus One unit helps shave the peaks and enables temporary loads larger than the connection size would otherwise allow.
