

Will Chinese companies build US solar panels?

Construction of U.S. solar-manufacturing plants by Chinese companies is also surging as they too seek to take advantage of U.S. incentives. Chinese companies will have at least 20 GW worth of annual solar panel production capacity on U.S. soil within the next year, enough to serve about half the U.S. market, according to a Reuters analysis.

Is China's largest solar company evading American tariffs?

A year ago, the Biden administration accused one of China's largest solar manufacturers of evading American tariffs. Now the company is building a massive panel factory in Texas -- and it could receive more than \$1 billion in tax subsidies under President Joe Biden's signature climate law.

What happened to solar panels in China?

Solar companies cut costs and prices sharply to maintain market share. That led to a few low-cost survivors while many other competitors were driven out of business in China and around the world. The deserted blue-walled factory of Hunan Sunzone, left, which once made solar panels in Changsha, China.

How many solar panels will China have in a year?

Chinese companies will have at least 20 GW worth of annual solar panel production capacity on U.S. soil within the next year, enough to serve about half the U.S. market, according to a Reuters analysis. The Reuters Power Up newsletter provides everything you need to know about the global energy industry. Sign up here.

How much does solar cost in China?

China's cost advantage is formidable. A research unit of the European Commission calculated in a report in January that Chinese companies could make solar panels for 16 to 18.9 cents per watt of generating capacity. By contrast, it cost European companies 24.3 to 30 cents per watt, and American companies about 28 cents.

Why is China letting solar companies fail?

The government decided 15 years ago to put extensive support behind solar power, and then let the companies claw it out. Beijing has shown a high tolerance for letting firms stumble and even fail in large numbers. Robots at a factory in China's Xinjiang region in May.
