

A geothermal resource occurs when water deep below the Earth's surface is heated by exposure to hot, permeable rock, resulting in dry steam or hot water. This steam is then used to spin a turbine to generate renewable energy. Calpine operates The Geysers, the largest complex of geothermal energy facilities in the world.

Calpine Energy Solutions, LLC is a licensed retail energy provider and is one of the largest energy suppliers in North America by volume. Most of our clients are large commercial or industrial entities that view the management of energy and carbon as an important strategic initiative and seek to leverage our expertise in data management, risk
