So, reducing energy consumption can inevitably help to reduce emissions. However, some energy consumption is essential to human wellbeing and rising living standards. Energy intensity can therefore be a useful metric to monitor. Energy intensity measures the amount of energy consumed per unit of gross domestic product.

The company uses photovoltaic panels to capture the energy from the sun and convert it into electricity. The company's solar energy projects are designed to be scalable, which means that they can be expanded as demand for energy grows. The company's wind energy projects are designed to harness the power of the wind to generate electricity.
