In simple terms, CUF shows us the ratio of real production to the plant's maximum potential in a given year. CUF Calculation Formula:  $\text{CUF} = \frac{\text{plant output in kWh}}{(\text{installed plant capacity in kW} * 365 * 24)}$  CUF measures the efficiency with which a solar power plant's installed capacity is used over time. It is expressed as a percentage.

Czechia approved a new National Energy Policy (SEP) aiming to reduce energy consumption and improve the economy's energy intensity. However, reaching the targets of the SEP will require greater effort if the country is to play its part in the global energy

In terms of renewable energy, Czechia has set a 20.8% share of energy from renewable sources in gross final consumption of energy in 2030 as renewable energy contribution to the EU renewable energy target for 2030. This level of ambition is below the share of 23% in 2030 that results from the formula contained

The capacity utilisation factor (CUF) for a solar photovoltaic (SPV) project is the ratio of the actual energy generated by the SPV project over the course of the year to the equivalent energy output at its rated capacity ???
