

How is energy consumed in Guam?

In Guam, the consumption of energy is heavily influenced by its remote location. Almost all energy is reliant on imports of petroleum products for use in transport and electricity. Guam does not have any domestic production of conventional fuels such as oil, natural gas, or coal.

How much power does Guam generate?

Guam has a rated generating capacity of 560 MW, more than twice its historical highest load. This power is supplied by several plants burning residual fuel oil operated for the Guam Power Authority by independent power providers. In 2015, electricity in Guam cost 2.5 times as much as on the U.S. mainland.

What type of fuel does Guam primarily use?

Guam imports most of its fuel, including gasoline and jet fuel for transport, and residual fuel oil for electricity. One third of electricity produced in Guam is used in commercial settings, including the leading industry of tourism.

What is going on in Guam?

Guam is undergoing significant changes in its electrical industry due to rising fuel costs and environmental concerns. Plans include the use of renewables, natural gas, and cleaner burning diesel power. Guam has a rated generating capacity of 560 MW, more than twice its historical highest load.

Does Guam have solar energy systems?

Until 2015, only a few off-grid photovoltaic systems (PV) and some distributed generation PV and small wind turbines were in use on Guam. Plans for several large solar farms have been announced. Guam has adopted a renewables policy that requires the reduction of fossil fuel consumption by 2020 to 20% less than the rate in 2010.
