Actually I am building an 10 - 15KWh powerwall for my house out of used cells from eBike and laptop batteries. The Dolidada with the highest data actually has the lowest measured capacity of the entire test field with only 418mAh. The highest measured value is 3,161mAh and comes from the EPGY with the stated 3,400mAh.

I recently bought a couple of 26650 cells branded with "Dolidada" at this store on Aliexpress. According to the specs on the seller's webpage this cell should have a capacity of at least 5.500mAh with a discharge current of 20A. Usually, these cells were rewrapped high current Keeppower cells with up to 6.000mAh.

Those have countless brands on them, random names like "dolidada" and stupid fake capacity. Some are made from old laptop cells. You shouldn't use that regardless of its real capacity because printing generic fake nonsense on it is a sign of a dubious company selling whatever they want. Batteries like these are a disaster waiting to happen
