

What is a dynawatt 230V power system?

The DYNAWATT 230V POWER SYSTEM consists of a belt-driven 250V three-phase generator and an electronic control unit. This unit transforms the 3-phase generator current into 230V, 50 Hz sine wave alternating current with a maximum output of 4000 or 5000 W. The system does not require additional connection to the 12V vehicle battery.

Can the dynawatt 230V power system be operated while travelling?

Can be operated while travelling. The DYNAWATT 230V POWER SYSTEM consists of a belt-driven 250V three-phase generator and an electronic control unit. This unit transforms the 3-phase generator current into 230V, 50 Hz sine wave alternating current with a maximum output of 4000 or 5000 W.

What is dynawatt 4000?

This unit transforms the 3-phase Generator current into 230V, 50 Hz sine wave alternating current with a maximum output of 2000, 4000 or 5000 W. Generate precise electrical power from your engine, regardless of RPM, with DYNAWATT 4000.

What equipment does dynawatt provide?

Transportation of special goods requires temperature control. DYNAWATT supplies the power needed on the road to cool or the cargo compartment. Air-conditioning, microwave, coffee machine, hair-drier, radar, pumps, desalination system- everything needed for comfort on board.

The system requires no extra battery power.
