The best (i.e. easiest and least costly) way - without question - is a wood stove and some sort of (Honda) 2 or 3 KW gas generator. Whenever the generator is needed, run an extension cord into the house from the generator. EDIT: Malcolm's idea of a propane space heater is a good idea, as long as it doesn't need electricity for a fan.

One fill-up lasts a long time, and powers most things in my house: fridges, freezer, forced hot air heat, lights, computer, Wi-Fii, and a bunch of misc things around the house. Solar and electric generators typically weigh under 10 pounds and feature a built-in carrying handle. Gas generators weigh anywhere from 50 to 300 pounds, so they

Standby generators, an even larger, stationary class that's typically installed just outside the house, hook directly into a home's electrical panel and typically turn on automatically when

Best Home Standby Generator: Generac Guardian 7209 Built in the United States, the Generac Guardian 7209 is the gold standard for home standby generators. Boasting up to 24kW of power, the Guardian can be set up to run on either natural gas or liquid propane as a fuel source (but you must decide this at installation time).

An electric generator works by converting mechanical energy into electrical energy. It operates based on the electromagnetic induction principle, which is the creation of an electric current by moving a wire next to a magnet. Scientist Michael Faraday discovered this phenomenon in 1831 when, after moving a magnet through a loop of wire, he
