

Which power and data units are best for a conference room table?

We've worked on conference room tables with power and data units from many manufacturers for our modern conference tables. Based on that experience, we have three favorites: Extron, Electri-Cable, and Mockett. Each is best for particular situations.

Which power & data solutions are best for your conference room?

Based on that experience, we have three favorites: Extron, Electri-Cable, and Mockett. Each is best for particular situations. Offering a variety of power and data solutions, we regularly use the Extron customizable plates in our conference room tables. These plates can be configured with any combination of plugs.

How do you access a conference table without removing the top?

It's harder to access the power and data ports without removing the top of the conference table. But they do look great. This strategy involves a removable unit consisting of a frame that holds the data port and the hatch. Like the frameless, we run the veneer continuously across each lid.

Do you need a power outlet for a conference table?

The plugs in the table are often integrated into a complete audiovisual system that contains many pieces of hardware. If you want anything more than simple power outlets in your table, you will need someone to design the entire system. We don't do that - our expertise is building modern conference tables.

Who makes custom conference room tables?

When it comes to custom conference room tables, Paul Downs is the pinnacle of craftsmanship. We design truly unique meeting and boardroom tables that are hand-crafted to your specifications, from power and data hatches right down to the grain of the wood we use.

Are conference room table bases wired?

Our conference room table bases are designed with wiring in mind. We make sure that there is a clear and accessible path from any of the pedestals to any other part of the conference table with power. And our

ELECTRICAL SURFACE POWER SYSTEM CONFERENCE TABLE POWER

bases are designed so that they can be assembled and wired before the top goes on - this greatly speeds up installation.
