French Southern Territories, comprising of several islands in the Indian Ocean, are isolated with a harsh climate, making technology and telecommunications development challenging. The territories have no indigenous population, with only temporary French military personnel, scientists, officials and support staff residing.

The energy situation of French islands is presented with a particular focus on the part of renewable sources. A higher share of renewable energy in the energy mix can be reached only with the development of the energy production efficient prediction, with the development of energy storage means and with an optimal management of the energy flux

Isolated French power systems, such as the overseas departments and territories, are facing high ambitions for decarbonization of the energy mix. These systems encompass a wide variety of situations, with wide range of consumption levels and numerous decarbonization strategies, which include massive penetration of solar and wind generation.

In its November 3, 2022 deliberation on the re-evaluation of public service charges for energy, the French regulator (Commission de r gulation de l' nergie) indicated that renewable energies could bring in up to 31 billion euros to the State budget between 2022 and 2023, largely financing the cost of the tariff shield (45 billion euros of
