An ESD Protected Area (EPA) is a defined space within which all surfaces, objects, people and ESD Sensitive Devices (ESDs) are kept at the same electrical potential. An EPA can be organised with Treston storage products. A modular anti-static ESD storage solution with user-oriented design and quality materials will work well in any space.

CCI is equipped to handle the design challenges of maximizing shelf space and storage and retrieval systems. We look at what is to be handled and how the system works, and then adapt a variety of ESD-safe materials and designs to match the requirements. Storage of components, PCBs, and reels are all common issues that require static-safe solutions.
