

Is the ESS-Chad a reliable measure of daytime sleepiness?

The ESS-CHAD is concluded to be a reliable and internally valid measure of daytime sleepiness in adolescents aged 12-18 years old. However, further studies are needed to establish its internal validity for children under 12 years and to establish external validity and accurate cut-off points for children and adolescents.

What is the difference between an ESS-Chad and an adult ESS?

The ESS-CHAD is very similar to the adult ESS, but with minor changes to the instructions and descriptions of some of the activities, making them more easily comprehended and more likely to be within the experience of children and adolescents. The recall interval is more clearly specified as 'over the last month'.

Who can answer the ESS-Chad?

Most children over the age of about nine years, and most adolescents, can answer the ESS-CHAD without assistance. Most younger children require parental assistance, or a parent/carer can answer the questionnaire for them. The ESS-CHAD has been shown to be valid, reliable, and unidimensional (Janssen et al, 2017).

How does ESS work?

ESS can be configured to optimise self-consumption or to keep batteries charged. When there is more PV power than is required to run loads, the excess PV energy is stored in the battery. That stored energy is then used to power the loads at times when there is a shortage of PV power.

Is the ESS-Chad valid?

The ESS-CHAD has been shown to be valid, reliable, and unidimensional (Janssen et al, 2017). A sample copy of the ESS-CHAD (English for Australia version) is available here in pdf. The ESS-CHAD is subject to copyright (© MW Johns, 1990, 2015). It is necessary to have a license to use the ESS-CHAD, whether or not a license fee is payable.

Is the ESS-Chad a 'normal' score?

The reference range of 'normal' scores is believed to be the same, but that needs confirmation. Most children over the age of about nine years, and most adolescents, can answer the ESS-CHAD without assistance. Most younger children require parental assistance, or a parent/carer can answer the questionnaire for them.
