

Does Brunei Darussalam have a high rate of electrification?

According to the World Energy Outlook which published in 2016 by IEA, Brunei Darussalam has achieved 100% rate of electrification with only 6% of transmission loss. According to Brunei Energy White Paper, the country is planning to cover 10% (954 GWh) of its electricity consumption from renewable energy by the year of 2035.

Does Brunei have a primary energy supply?

Nevertheless, the domestic natural gas utilisation still dominates the primary energy supply (80%). Oil covers the remaining 20% of primary energy supply. Brunei's total energy supply is declining in proportion due to low oil price in 2016 which makes Brunei held their oil production.

Why is Brunei Darussalam independent from energy imports?

The country is independent from energy import, due to its vast domestically available oil and gas reserves. Brunei Darussalam has the ninth largest Liquefied Natural Gas (LNG) reserve in the world as well as the fourth largest oil producer in South East Asia region.

Why does Brunei have a low energy supply?

Brunei's total energy supply is declining in proportion due to low oil price in 2016 which makes Brunei held their oil production. Figure 2 presents the electricity generation in the power sector.

How can Brunei reduce energy consumption?

Brunei has implemented the National Appliance Standards and Labelling Regulation, which aims at reducing domestic energy consumption in order to enable higher exports of gas. The Energy Efficiency and Conservation Program envisages the reduction of energy use by 45% by 2035 based in 2005 level

What is Brunei aiming to achieve in 2035?

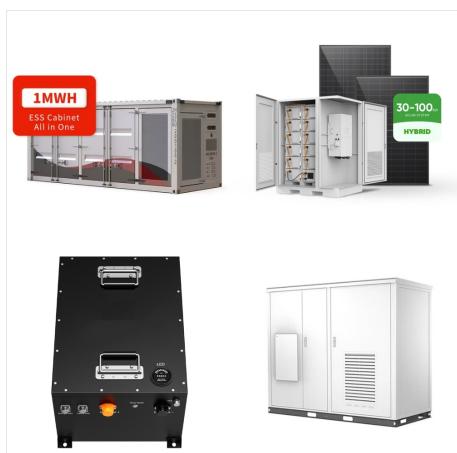

The target is to increase the share of Renewable energy in the total power generation mix by 10% or 954,000 MWh in 2035 and at the same time to reduce energy intensity by 45% in line with Brunei's commitment to Asia-Pacific Economic Cooperation (APEC), with total of 3,420 ktoe. The majority of natural gas is exported.
