

How much has power systems changed over the year?

So on average, across the company, very, very much by segment, but 2.5% for the year, and that really hasn't changed. That's not changed in the results, but it definitely has been an important driver of the Power Systems results. And I don't think it's going to vary a lot that year-over-year increase should mostly hold across all the quarters.

Will Monolithic Power Systems stay the course heading into earnings?

The majority of analysts covering the company have reconfirmed their estimates over the last 30 days, suggesting they anticipate the business to stay the course heading into earnings. Monolithic Power Systems has only missed Wall Street's revenue estimates once over the last two years, exceeding top-line expectations by 1% on average.

How did power systems perform in the second quarter?

The impressive power generation performance in North America and across the globe helped us achieve record sales and profitability in the Power Systems segment. Our second quarter international revenues decreased 2% compared to last year.

Is the engine business guiding revenue down 3% year-over-year?

The engine business, the second half of the year, you're guiding the revenues down only 3% year-over-year. And I'm just trying to go through heavy truck builds down double digit or the parts business mutes that. The light duty has the soft fourth quarter on the model change.

What is the outlook for the power Gen market?

On the market outlook, what I would say is in the power gen market, the continued growth that we see there, in particular the data center, I don't see that letting up anytime soon, and where we have strong demand, high backlog. And as you know, we talked about in May, making some capacity investments to take advantage of the growing market there.

How will the energy transition affect e-mobility and electrolyzer revenues?

As we noted at our Analyst Day, the energy transition is progressing more slowly, impacting both our e-mobility
