

The energy sector offers solutions to Finland's problems. We do this by investing in the future and inviting everyone to join in making a change. Our vision for Finland's energy future presents two alternative scenarios: in the best case, we are European champions of the energy transition; in a less ambitious scenario, we are persistent

Sustainable Energy Solutions Sweden Holding AB (SENS) has acquired full ownership of two energy storage projects to be built at the non-active Pyhasalmi mine in Finland which are of two different technologies and have a combined capacity of 160 MW.

The project development phase now being launched is led by P2X Solutions Ltd, a Finnish pioneer in green hydrogen and Power-to-X technology. The company is currently constructing Finland's first industrial-scale green hydrogen and synthetic methane production plant in Harjavalta in western Finland.
