

Why is energy sector development a strategic issue in Eritrea?

The current electrification rate (fraction of people with access to electricity) in Eritrea is about 40%. The third factor that makes energy sector development a crucial strategic issue is the fact that current and future biomass consumption is a potentially growing drain on Eritrea's ecosystem.

How much power does Eritrea have?

According to government officials, whereas during the initial period of post-independence, the entire power generation within Eritrea was at a feeble 15 mega watts, today it hovers at 200 megawatts. However, that figure is still miniscule, and the energy sector must continue to remain a key focus.

What is the future of Eritrea?

Eritrea's mining sector is one of the fastest-growing, contributing significantly to its economy. With the help of nongovernment organizations, external companies, and other parties, the economy could become stronger. Growth from the mining sector, as well as the agriculture sector, would increase possibilities for the future of Eritrea.

Financing Approval date 1 March 2023 Project name: Dekemhare 30-megawatt photovoltaic solar power plant project in Eritrea.
