

Electric motors account for 70 % of the total industrial electrical energy demand. Improving the energy efficiency and energy productivity based on a comprehensive drive system approach make a significant contribution to a sustainable future : A high efficiency SIMOTICS motor perfectly interplays with a SINAMICS converter for energy saving and variable speed operation.

Energy Efficient Drives Energy consumption of Electric Drive Units. In industrial applications, Electric Drive Units are responsible for between 30% and 40% of all electrical energy generated. Optimisation of efficiency for the entire drive system including the application/process is a significant factor ??? the potential is typically about 30%

Energy Efficiency with Electric Drive Systems
