

The Global Energy Storage Database (GESDB) aims at providing high-quality and accurate data on energy storage projects around the globe. In this poster, we present an overview of all the features of the GESDB including recent updates to the database.

Energy Storage Reports and Data. The following resources provide information on a broad range of storage technologies. General. U.S. Department of Energy's Energy Storage Valuation: A Review of Use Cases and Modeling Tools; Argonne National Laboratory's Understanding the Value of Energy Storage for Reliability and Resilience Applications

The DOE Global Energy Storage Database provides research-grade information on grid-connected energy storage projects and relevant state and federal policies. All data can be exported to Excel or JSON format. As of September 22, 2023, this page serves as the official hub for The Global Energy Storage Database.

The database has been restructured to make it easier to query, validate and update. The data now are specified in different layers including general project information (e.g., name, location, size, ownership, cost) and specific information (e.g., system/subsystem specifications).
