

Less than 3% of the population has access to electricity in Central African Republic. Grid-based electricity supply is insufficient to meet electricity demand: it is unavailable 28% of the year on average, mainly due to generation outages. Free and paid data sets from across the energy system available for download. Policies database. Past

Energy intensity can therefore be a useful metric to monitor. Energy intensity measures the amount of energy consumed per unit of gross domestic product. It effectively measures how efficiently a country uses energy to produce a given amount of economic output. A lower energy intensity means it needs less energy per unit of GDP.

The energy situation in the Central African Republic
has been turbulent for a long time. The slow
development of infrastructure has resulted in the
shortage of power supply that plagued the local
population. The overall electrification rate of the
country is around 15.5%, with less than 2.3%
population in the rural areas having access to
