Renewable heat. Renewables also have an important role in providing heat for buildings and industrial processes. To achieve decarbonisation and energy saving objectives, many countries are encouraging individual homes and buildings to shift from fossil fuel heating systems such as gas- or oil-fired boilers to systems like heat pumps which are much more efficient and can be ???

Guatemala: Energy intensity: how much energy does it use per unit of GDP? Click to open interactive version. Energy is a large contributor to CO₂ ??? the burning of fossil fuels accounts for around three-quarters of global greenhouse gas emissions. So, reducing energy consumption can inevitably help to reduce emissions.

The building sector is the largest energy consumer in the Mediterranean area. Most buildings are energy inefficient as lack of interventions over time have led to increase annual energy consumption and CO₂ emissions. To tackle these common challenges, SOLE supports cost-effective and innovative energy rehabilitations of public buildings. Through knowledge sharing ???
