???Lithium-ion battery intelligence, management and lifecycle fueled by ultrasound technology | At Titan, we've engineered a breakthrough technology based on the proven science of ultrasound. Our team has applied the ultrasound concept to lithium-ion batteries, delving deep into their inner workings to provide ???

TITAN combines ultrasonic sensing technology, machine learning, and edge computing to observe and monitor batteries in real time. By observing batteries at the molecular level they analyze battery behavior, performance, and internal states that turn traditional battery management systems into smart IoT devices in order to optimize the overall battery performance.

??? Battery safety is imperative for the widespread adoption of battery and battery-powered systems
??? A major concern of global EV and energy stationary storage (ESS) market adoption is the possibility of a battery/system failure, leading to fires and explosions, and the dangers and publicity associated with them as seen in headlines all over the world ??? Thermal ???
