The 12 Vdc battery charger is continually monitored, and the battery health is tested daily to ensure backup power availability. A 16 Ah battery is standard with the SEL-651RA to power the control and accessories, including security devices, radios, modems, and other communications equipment in the event that ac power is lost.

A 2-MW battery system at Idaho Power's substation near Melba, Idaho, caught fire early Oct. 2, then burned off and on until the afternoon of Oct. 4, Adam Richins, senior vice president and chief operating officer at Idaho Power, told Clearing Up.

Also in the control house is the substation battery bank (typically 48 or 125 VDC). The battery bank is a very important part of the substation because it enables the protective relays to trip the circuit breakers in the case of a fault and also powers the RTU for communicating with the central SCADA system.

The Territory of Heard Island and McDonald Islands [2] [3] (HIMI; [4] ISO 3166 region code: HMD, HM, 334; [5]) is an Australian external territory comprising a volcanic group of mostly barren Antarctic islands, about two-thirds of the way from Madagascar to Antarctica.

The SEL-RPM combines multiple power control sources (e.g., a dc battery, station service, and backup generator) via three ac inputs and one dc input. The diversity of control power sources, especially in stations without batteries, increases the reliability of your control power.
