

We've chosen some robust and ultra-reliable UPS battery backups from some of the most respected brands in the industry. These systems offer robust battery backup for all your devices, fast-charge ports for portable devices, and advanced surge protection, among other great features. Our Top Picks.

A home UPS unit is a battery backup and surge protector all in one. When your power goes out, the UPS kicks in, keeping your electronics running for a short time until the power returns. Browse the top-ranked list of home UPS below along with associated reviews and opinions.

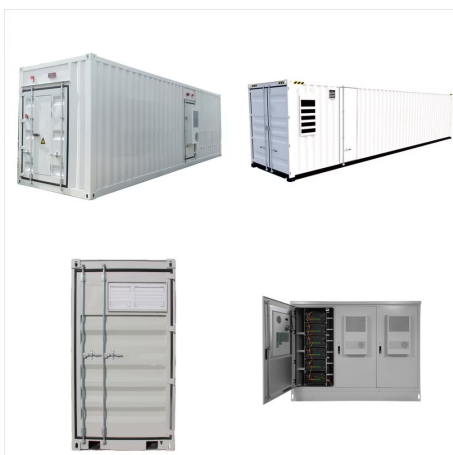

Our pick for the best UPS overall goes to the APC BR1500G Backup Battery. At 1500VA/865W, it can power most devices, including computers, external hard drives, and wireless routers, from a few minutes to several hours, depending on the total connected load.

An uninterruptible power supply (UPS) is a type of backup battery that will continue to provide electrical power to the electronics that you have plugged into it even if electricity from your home outlets cuts out.

An uninterruptible power supply (UPS), offers guaranteed power protection for connected electronics. When power is interrupted, or fluctuates outside safe levels, a UPS will instantly provide clean battery backup power and surge protection for plugged-in, sensitive equipment.

What is a UPS System? A UPS, at its most basic, is a battery backup power system that supplies power long enough for equipment to properly shut down when utility power fails. It helps prevent loss of data and minimizes the stress a hard shutdown causes on your electronic equipment.

If you refuse to settle for anything less than the best, the APC Back-UPS PRO 1500VA is the right uninterruptible power supply for you. Its 1500VA/900W capacity should be more than enough for any modern gaming PC, as well as any monitors, TVs, speakers, or any peripherals you have plugged into it.
