

Is the Honduran electricity grid interconnected with other countries?

The Honduran electricity grid is interconnected with the grids of its neighbors Nicaragua, El Salvador and Guatemala. However, the capacity of the interconnections is limited. It is expected to be expanded as part of the Central American Electric Interconnection System (SIEPAC) through a 230 kV transmission line with a capacity of 300 MW.

Is biomass a source of electricity in Honduras?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Honduras: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.

What type of power system does Honduras use?

With an installed generation capacity of 1,568 MW (2007), Honduras relies on a thermal-based power system (accounting for nearly two-thirds of its total installed capacity), which is very vulnerable to high and volatile international oil prices. [full citation needed] The generation mix is as follows:

What is off-grid electrification in Honduras?

Off-grid electrification in Honduras consists mainly of installing diesel minigrids, operated by independent companies to serve some larger villages on the bay islands ("Roatán Electric Company" RECO, "Utila Power Company" UPCO, "Bonaca Electric Company" BELCO) and in Puerto Lempira, Gracias a Dios (INELEM and ELESA).

How many CDM-registered projects are there in Honduras?

Currently, there are eleven CDM-registered projects related to electricity generation in Honduras. Nine of those projects are hydro plants, which represent 80% (177,636 tCO₂ e) of the total estimated annual emissions reductions. The two remaining projects are for cogeneration and biogas recovery and electricity generation.

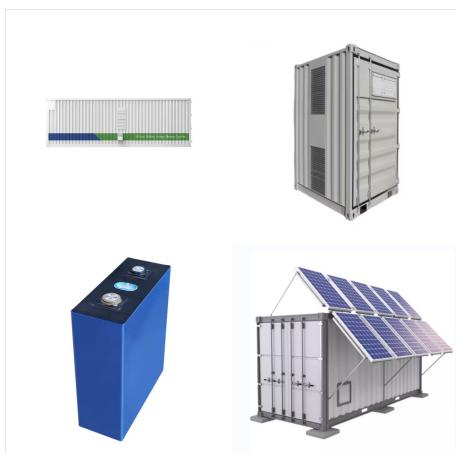

Does Honduras have electricity?

Honduras has one of the lowest rural electrification rates in Latin America after Nicaragua. About 54 percent of the rural population still lacks access to electricity. In absolute terms, it is estimated that more than 386,000 households or more than 1.93 Million people in rural areas remain without access to electricity.

Gross electricity generation of the national grid (Sistema Interconectado Nacional ???SIN) is currently around 6,539 GWh, of which 53% are petrol power plants, 42% hydro power plants, 1% coal power plants, 1% gas and 3% co-generation.
