

What is HK Electric's mobile battery energy storage system?

On September 6, 2023, the ceremony of the mobile electricity supply system at HK Electric's Cyberport Switching was successfully held, which marked that the SCU 250KW/576KWh vehicle-mounted mobile battery energy storage system was officially put into operation at HK Electric's Cyberport Switching Station. The system is a technology that combines...

What is HK Electric's Cyberport switching station?

HK Electric's Cyberport Switching Station (HK Electric) is mainly responsible for the power generation, transmission and distribution of Hong Kong Island and Lamma Island. With the increasing demand for electricity in Hong Kong in recent years, the original power reserve cannot meet the development needs of enterprises.

Can a battery replace a commercial lithium based battery?

Prof. Yi-Chun Lu has created a safer, cheaper and more environmentally friendly battery as a substitute for commercial lithium-based batteries. Developing new technologies for affordable and clean energy will be critical for meeting the needs of a growing population globally while also meeting carbon reduction targets.

Could a new generation of lithium-ion batteries be a workable solution?

A new generation of lithium-ion batteries developed by a team led by Dr Dong-Myeong Shin from the Department of Mechanical Engineering at the University of Hong Kong (HKU) paves the way for a workable solution.

How much electricity does HKIA use?

Before the COVID-19 pandemic, annual electricity consumption of HKIA reached 299,760 MWh, with an electricity intensity of 3.99 kWh per passenger. Owing to the various development projects at HKIA, an increasing number of assets and systems will be commissioned, which inevitably leads to continuous growth of electricity demand.

Why does HKIA need a new emergency power capacity?

Owing to the various development projects at HKIA, an increasing number of assets and systems will be commissioned, which inevitably leads to continuous growth of electricity demand. Therefore, aside from the normal power supply, upgrading the existing emergency power capacity is critical to cope with increased

essential loads in the future.

Enerlution Hybess : 1. The highly integrated ESS, fully pre-assembled, facilitates transportation, on-site installation, and operational maintenance. 2. Modular design supporting 2-10 parallel units, facilitating system expansion. 3. Secondary fire protection for cabinet and PACK, automotive-grade software for thermal runaway warning. 4. IP65 protection for battery ???

Enerlution Batteries also incorporate advanced management and monitoring systems that optimize energy storage and ensure the long-term health of the battery. By leveraging real-time data and predictive analytics, Enerlution Batteries can adapt to changing energy demands and operate at peak efficiency, maximizing their performance and lifespan.
